

ENVIRONMENTAL POLICY

KOVOLIT, a. s.

Since its inception, KOVOLIT, a.s. has been managing its operations to the fullest extent possible with regard to the environment and therefore has decided to implement an environmental management system according to the international standard ČSN EN ISO 14001:2015, which was successfully certified in 2005.

To comply with the environmental requirements of the international standard ISO 14001 and environmental legislation in the field of aluminium alloy production from secondary raw materials, KOVOLIT a.s. has announced its position on environmental protection in environmental policy:

- we observe and comply with all applicable environmental laws and regulations to which the company is subject, while taking into account the requirements of stakeholders
- in addition to economic and social responsibility, environmental responsibility is a very important part of our corporate strategy
- for compliance with the principles of environmental behaviour is responsible not only the top management of the company but also for every single employee of the company. To achieve this, we use appropriate guidelines and procedures integrated into our processes
- we strive to use the technologies and materials that are as environmentally friendly as possible
- we motivate our employees not only to have a responsible approach to the environment but also to come up with ideas how to diminish the impacts of our processes and activities
- we monitor and evaluate the negative effects of all our processes and activities on the environment, and we are constantly looking for ways to minimize them
- we record and evaluate the impact of all our current activities on the environment and inform all stakeholders, including the public, about our environmental profile
- we strive to work together with the relevant official bodies and organizations involved in the event of accidents on regulations, agreements, emergency plans, operational rules and other measures to protect employees, the public and the environment
- we consider preventive care that takes precedence over consequential remedies our priority
- by introducing modern available technologies, we will minimize negative impacts on the environment and offer economically and environmentally friendly solutions responding to the needs and requirements of customers, the state administration and the legitimate interests of target groups and the public
- we use water and energy and purchase material inputs efficiently and economically to reduce their consumption
- we appropriately apply the principles of our environmental policy and require the same from our contractual partners

The management of the company is committed to protecting the environment to the fullest extent possible, to comply with mandatory environmental management system obligations, to fully cooperate with state authorities, local authorities, interest groups, civic initiatives, and

contractual partners to protect the environment and prevent critical situations. Last but not least, we strive to constantly improve and evaluate our environmental protection measures.
